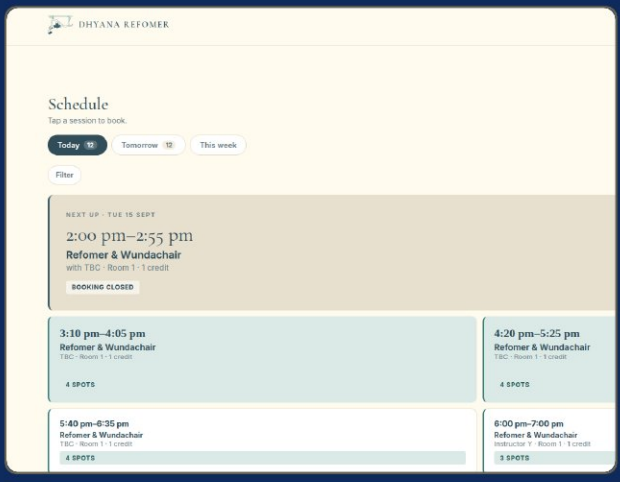
NairobiSites

WEBSITES & BUSINESS SOFTWARE

Websites, and the *software* behind the business.

Built in Italy. Made for businesses in Kenya.
Your website. Your system. Your customers. On your own domain.



NAIROBI, KENYA · NAIROBISITES.COM

WEBSITES & ONLINE SALES

A website you can manage yourself.

Website + SiteControl

Change text, photos, prices, opening hours and pages without calling us every time. You edit, preview and publish from a simple control panel. You don't touch the code or the layout, so the design stays intact. SiteControl is included with every website.

Builders · engineers · clinics · dentists · law firms · schools · churches · NGOs · manufacturers · logistics · farms

Online shop

Catalogue, cart and checkout, with M-Pesa, Pesapal, Flutterwave and card payments. Orders, customers and stock stay in the same system as the website.

Retail · wholesale · click and collect · subscriptions · repeat deliveries · fee collection

Property websites

Properties for sale or rent, photos, details, enquiries and valuation requests. You can later add viewings, rent tracking and lease dates if you need them.

Estate agents · developers · landlords · property managers · land and plot sales

Websites built for search and AI

We structure websites so search engines and AI tools can clearly understand what the business does, what it offers and where it operates.

VisualMatch — search a catalogue with a photo

A customer shows you a picture. VisualMatch searches your catalogues and finds the closest products you actually sell. Useful when the customer knows what they want, but not the product name or code.

Tiles · fabrics · timber · stone · wallpaper · leather · paint · spare parts · hardware · furniture · fashion

BOOKINGS, CLIENTS & PAYMENTS

Your bookings. Your customers. Your payments.

Direct booking for hotels & lodges

Take bookings directly from your own website. Show rooms, availability and seasonal prices, and let guests pay by M-Pesa, Pesapal or card. You keep the customer details and booking history. You can also sell packages that are harder to offer through a booking platform: room + safari, room + dinner, room + airport transfer, long-stay rates. You pay for it once, not on every booking.

Hotels · lodges · tented camps · guest houses · apartments · hostels

Car hire, tours & safaris

Manage vehicles and availability by date, without double bookings. Prices can be calculated from days, mileage and driver options. Take deposits online and manage handover and return checks. For tours, manage itineraries, departure dates, available seats, deposits and vouchers.

Car hire · safari operators · airport transfers · equipment hire · event hire · driving schools

Gyms, studios & appointment businesses

LIVE IN NAIROBI

Clients see the timetable, book and pay online. Manage credits, packages, waiting lists, staff rotas, commissions, receipts, refunds and client records.

Gyms · Pilates studios · clinics · dentists · physiotherapy · salons · barbers · spas · driving schools · sports facilities

EasyQuote — build the quote once

Create a quotation while speaking with the customer. Items, quantities and prices are already there, so the accepted quote can move directly into the job without entering everything again.

Builders · installers · joiners · metalwork · printers · signmakers · catering · agencies

STOCK, ORDERS & OPERATIONS

Know what you have, what it costs and what to order.

Shop, stock & ordering

Customers, products, barcodes, quotations, orders and stock in one system. Stock is calculated from real movements rather than a number someone has to keep changing manually. Different customers can have different prices. Purchase invoices can be read into the system, so you can track your actual buying cost and margin.

Ordering with a scanner

See something running low? Scan the barcode and it goes on the next supplier order. Scan it four times, the quantity becomes four. The system also knows your usual reorder cycle, your last and best buying prices and seasonal demand, and suggests what to order. **You decide: nothing is ordered without confirmation.**

Hospitals · clinics · pharmacies · schools · hotels · restaurants · construction sites · workshops · depots · NGOs

FoodManager — for restaurants, kitchens and groups

From the day's bookings, the kitchen knows how many people it is preparing for. Delivery notes are captured from a photo. Recipes, quantities, purchasing and stock are connected, so you see what each dish costs and what should have been used. If a recipe calls for 100 g and the kitchen regularly uses 150 g, the numbers show it. With more than one kitchen, you see the result site by site.

Restaurants · hotel kitchens · school canteens · staff canteens · hostels · care homes · hospitals · caterers

WHO WE ARE

An Italian software company working in Nairobi.

NairobiSites is the Kenyan side of **Getaweb**. We build websites, but also the software businesses use behind them: bookings, customers, stock, payments, quotations and day-to-day operations. One system, on your own domain.

Already working here

A Pilates studio in Nairobi already uses our software for bookings, credits and payments. We also work with builders, engineers, dentists, lawyers, estate agents, designers and manufacturers in Kenya and Italy.

HOW WE WORK

1. **We start with your business.** One meeting or one call. We look at how you work now and what actually needs improving.
2. **You get a written quote.** Clear scope, clear price. You can buy the whole system or only the parts you need.
3. **We build it with you.** You see the work as it develops, not just at the end.
4. **We hand it over.** We train you and your staff so you can use the system yourselves.
5. **We stay available.** Hosting, support and future changes when you need them.

- Runs on Cloudflare's network and works well even on slower connections
- No server to buy or maintain in your office
- Your data can be exported at any time
- Website, software, domain and email can all be managed in one place

BUY THE WHOLE SYSTEM, OR ONLY WHAT YOU NEED

Stock. Orders. Bookings. Payments.

Our software is built from modules that already work together: customers, catalogue, calendar, payments, stock, documents, quotations and messaging.

Different businesses need different things. A clinic may need stock and purchasing. A salon may need bookings and payments. A contractor may need quotations and customer management.

You start with what you need now. More can be added later.

If your business needs something we do not already have, we build it around the parts that are already there. So we don't have to start from scratch each time.
